Updates to Western Australia's vascular plant census for 2014

The census database at the Western Australian Herbarium (PERTH), which provides the nomenclature for the website *FloraBase* (Western Australian Herbarium 1998–), lists current names and recent synonymy for Western Australia's native and naturalised vascular plants, as well as algae, bryophytes, lichens, slime moulds and some fungi. The names represented in the census are either sourced from published research or denote as yet unpublished names based on herbarium voucher specimens. This paper summarises the 169 name changes made to this database in 2014.

Fifty-nine taxa were newly recorded for the state, of which 12 are naturalised and 21 have been added to the *Threatened and Priority Flora list for Western Australia* (Jones 2014) (Table 1). Plant groups for which a number of name changes were made in 2014 include *Acacia* Mill. (Maslin 2014a, 2014b, 2014c, 2014d; Maslin & Barrett 2014), *Calandrinia* Kunth. (Obbens 2014a, 2014b, 2014c; West & Chinnock 2013), *Leucopogon* R.Br. (Hislop 2014), *Pauridia* Harv. (Snijman & Kocyan 2013), *Pterostylis* R.Br. (Jones & French 2014a, 2014b) and *Stylidium* Sw. ex Willd. (Wege 2014a, 2014b). Under the Council of Heads of Australasian Herbaria (CHAH) guidelines for informal names (Barker 2005), manuscript names are being converted to phrase names unless publication is imminent. Three manuscript names were updated to phrase names through this process, while four manuscript names and 36 phrase names were formally published (Table 2). Three taxa were removed from the census as they are now considered to be intergrades or sterile hybrids (Table 2; see Thiele & Parker (2014) for a summary of PERTH's policy regarding hybrid names). Table 2 also includes cases where there has been a change of taxonomic concept, exclusion or rank change.

Table 2. Changes to existing entries in Western Australia’s vascular plant census during 2014. Excluded name = a name used in the botanical literature that actually refers to one or more different taxa never occurring in WA; nomenclatural synonym = a superseded name based on the same type specimen as the accepted name—the epithet is usually transferred to a different genus name or rank; taxonomic synonym = a superseded name based on a different type specimen to the accepted name; orthographic variant = mis-spelling of a name in the original publication; *in litt.* = in correspondence; *in sched.* = on herbarium sheet/label. CHAH (date) = date Australian Plant Census updated. Status: * = naturalised; T, P1–P5 = Conservation Codes following Jones (2014). Nothotaxon = named hybrid between representatives of two or more taxa.
